

## Why should my company get the ISO27001 certification?

✓ **Good security:** ISO27001 covers thoroughly nearly all aspects of information security. These include technical measures, physical security and management of HR and supplier risks.

✓ **Retain and gain clients and investors:** Stakeholders want to know that your organisation is able to protect sensitive data. ISO27001 gives them confidence.

## And why use Kiowa for ISO27001 implementation?

✓ **Security prioritised:** Kiowa makes robust information security the main objective of ISO27001, rather than treating the project as a box-ticking exercise.

✓ **Efficient process:** The implementation process and certification can be faster than you may expect, especially if your organisation is fully engaged. It does not have to be painful!

✓ **Reduced impact on personnel:** The time taken from your own employees is minimised, with Kiowa handling nearly all aspects of documentation and preparation. However, relevant personnel will be well-informed and competent for certification audits.

✓ **2022 vs 2013:** You can now opt for the 2022 revision of ISO27001, which was published in October of last year.
